

Nylabone makes a chew for just about every dog.

It's important that you get to know your dog's chewing style. You have a responsibility to *select the proper size and formulation for your dog's breed, age, weight and chewing strength.*

SIZE OF DOG	SIZE OF NYLABONE CHEW
Up to 15 lbs.	Petite or Small
Up to 30 lbs.	Regular or Medium
Up to 50 lbs.	Wolf or Large
Over 50 lbs.	Giant, Souper or X-Large

These sizes are only GUIDELINES:

Many little dogs are powerful chewers and may need a **larger size!**

If your dog is between sizes always choose the larger size.

The pressure exerted by a strong chewer's jaw is considerable, and when directed straight down can put tremendous (as much as 450 psi) stress on the dog's teeth.

It is recommended that non-edible chews be large enough to encourage chewing from the side rather than the top and bottom.

	Durable, Flexible & Edible Bones	Rhino Cone	Rhino Bone	Double Action
Petite	3 ¾"	2 ¾"	n/a	n/a
Regular	4 ½"	3 ¼"	4 ¾"	5"
Wolf	5 ½"	4"	6 ¾"	7 ½"
Giant	8"	5 ¼"	7 ½"	n/a
Souper	7 ¾"	n/a	8 ½"	9"
